1. The following is an examiner's statement of reasons for allowance: applicant's responses filed 2/13/2006 are found persuasive over the applied prior art. The prior art of record fails to teach or fairly suggest a combination of a frequency divider and a first generating means for generating a first periodic signal, a second generating means for generating a second periodic signal which is in anti-phase with the first periodic signal, wherein said first and second periodic signals are analogue signals having an amplitude which causes said transistors to be not fully open or fully closed but to act as variable resistances as called for in claims 59, 75, 84 and 85. Therefore, claims 59-88 are presently allowed.
